REMOTE PATIENT MONITORING

CENSON@Care

REMOTE PATIENT MONITORING

Health challenges – solved by CENSON® Remote Patient Monitoring

CENSON® Care is a universal remote patient monitoring platform that offers the flexibility to adapt to national as well as local clinical guidelines – by using disease-specific clinical workflows. CENSON® Care is easily adaptable to any condition or chronic disease.

CENSON® remote patient monitoring supports off-the-shelf medical devices and tablets.

Web portal and tablet app

CENSON® Care allows the physician to design a clinical workflow, or to use existing workflows designed by doctors worldwide.

The workflow is processed by the patient on a user-friendly tablet app, according to a defined schedule.

With the user-friendly tablet optimized app:

- Patient instructions are provided
- Diagnostic questions are answered
- Vitals signs are monitored
- Video consultation can be established

All data recorded in the app are instantly available to clinicians on the CENSON® Care web portal.

Telemedicine and e-health is proven to make a positive difference in patients quality of life. **Our telemedicine services** enables remote patient monitoring and engage patients in their own health and well being.

Please **contact us** for more information about our remote patient monitoring services and solutions.
